Proceedings of SPIE 0277-786X, V. 9566

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Organic Light Emitting Materials and Devices XIX, edited by Franky So, Proc. of SPIE Vol. 9566, 956601  
© 2015 SPIE · CCC code: 0277-786X/15/\$18 · doi: 10.1117/12.2218665

Proc. of SPIE Vol. 9566 956601-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

**Paper Numbering:** *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a six-digit CID article numbering system structured as follows:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

## WOLED AND LIGHT EXTRACTION

---

- 9566 1F **Fabrication of a three-dimensional nanoporous polymer film as a diffuser for microcavity OLEDs (Invited Paper)** [9566-43]
- 9566 1G **Anisotropy in OLEDs (Invited Paper)** [9566-44]
- 9566 1H **Extracting and shaping the light of OLED devices** [9566-45]

---

## POSTER SESSION

---

- 9566 1N **Inkjet printing of photopolymerizable small molecules for OLED applications** [9566-53]
- 9566 1P **Reduced concentration quenching in a TADF-type copper(I)-emitter** [9566-57]
- 9566 1R **Dependence of light outcoupling in organic light-emitting devices on ITO thickness and roughness** [9566-61]
- 9566 1S **High performance inverted top-emitting organic light-emitting diodes with enhanced intrinsic quantum yield** [9566-62]
- 9566 1X **To enhancement illuminance efficiency of OLED by thin film included microparticle** [9566-67]
- 9566 1Z **Study on cadmium sulphide nanoparticles on blue and green light emitting polymers** [9566-69]
- 9566 2I **A comparison of the effect of joule heating vs thermal annealing on the morphology of typical hole transport layers in organic light emitting devices** [9566-71]
- 9566 2J **Thermally activated delayed fluorescence evidence in non-bonding transition electron donor-acceptor molecules** [9566-80]
- 9566 2E **Highly enhanced phosphorescent organic light-emitting diodes with cesium fluoride doped electron injection layer** [9566-85]
- 9566 2F **Numerical characteristics of the intensity distribution for a white organic light-emitting diode** [9566-86]
- 9566 2N **Long-lived and highly efficient green and blue phosphorescent emitters and device architectures for OLED displays** [9566-96]

## Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.
